

COVID-19 TESTING FOR SURFACE, WATER & AIR

COVID-19 is currently known to be transmittable through respiratory droplets, contact and very likely, air. With the current testing capacity of the country, clinical testing alone might not be enough for effective disease containment.

The way virus moves

Types of Samples

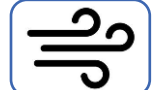

Surface swabs

Food & food packaging

Raw/ treated sewage

Air Samples

General Workflow

Sampling

RNA Extraction

RT-qPCR

Field sampling

Sampling services by Field Microbiologist are available

Talk to us

Please contact us to discuss your analysis requirement and we will assist you with the proposal.

Follow us

Why do we test environmental samples?

- **Air & surface testing**
 - Better prevention
 - Better tracking on how virus moves
 - Better tracking on duration of viral persistence
- **Sewage testing**
 - Early warning
 - Identifying areas for targeted testing
 - Assessing the effectiveness of mitigation plan
