

COVID-19 TESTING FOR MARITIME INDUSTRY

Ships are essentially floating cities on the seas. COVID-19 poses a challenge to the maritime industry that has never been previously encountered. Approximately 150,000 to 200,000 seafarers are on board ships around the world due to travel restrictions imposed by countries to limit the spread of COVID-19.

Risk of Infections on Ships

	Isolated environment
	Shared facilities
	Limited medical facilities

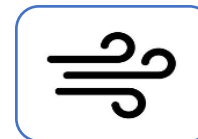

What are the Benefits of the Test?

- To make sure that the vessels are free of COVID-19
- To be certain that the sanitation precautions are sufficient
- To rule out the need of screening every single person on board

Sampling

Frequently touched surfaces & hands

Air samples in common areas & enclosed spaces

Sewage containing human excrements

- Sampling services by trained Field Microbiologists are available

Test Methods

RT-qPCR (standard method for COVID-19 testing used by MoH)
