

## PROTECTING THE VULNERABLE

Children and the elderly are often listed among the vulnerable groups in healthcare contexts. In the midst of COVID-19 pandemic, how do we make sure they are well protected in our facilities?

### Did you know that

Risk of developing severe illness from COVID-19 increases with age

Children are less likely to become sick, but at risk of developing multisystem inflammatory syndrome in children (MIS-C) after the infection

### COVID-19 & Microbial Hygiene

- We shed microbes wherever we go. They leave traces in our surroundings, and can be picked up by simple swab tests.
- Testing for COVID-19 in the environment (surface & air) can tell us if our surroundings are free of the virus
- Traces of other microbes (e.g., bacteria & fungi) are much more easily detectable than viruses. They are not always harmful, but can serve as useful indicators on the effectiveness of our disinfecting procedures.

### Follow us

### Potential Sampling Points

Door handles & knobs

Water dispensers

Switches

Hands

Shared toys

Restrooms

### COVID-19 Environmental Testing Package worth RM4xxx

- 10-point surface swab sampling
- 1 air sampling
- FREE ATP swab test with each surface sample

Now at only **RM3xxx!**

### ATP Swabs

#### Hygiene Indicator

- Detecting traces of microbial activities on surfaces
- Is your disinfecting procedure effective? Find out instantly.
