

COVID-19 TESTING FOR EDUCATIONAL FACILITIES

Children are less likely to become sick from COVID-19, but are at risk of developing multisystem inflammatory syndrome in children (MIS-C) after the infection. Now that schools are reopened, how ready are the educational facilities to operate in the 'new normal'? Are the students well-protected?

COVID-19 & Microbial Hygiene

- We shed microbes wherever we go. They leave traces in our surroundings, and can be picked up by simple swab tests.
- Traces of other microbes (e.g., bacteria & fungi) are much more easily detectable than viruses. They are not always harmful, but can serve as useful indicators on the effectiveness of our disinfecting procedures.

Why Should We Test the Educational Facilities?

Students and educators who show no symptoms could be spreading the disease unknowingly

To make sure that the premises are free of COVID-19

To be certain that the sanitation precautions are sufficient

To rule out the need of screening every single students/staff members
